GENERAL OVERVIEW

Made in Spain
Made for You

TREATMENTS:

TONING: This treatment strengthens facial muscles, enhancing the contour and firmness of the face. By stimulating the deep layers of muscle, it promotes a defined appearance and helps sculpt the facial shape. Consistent toning reduces sagging, offering a naturally lifted and youthful look over time.

LIFTING: Focused on lifting and tightening sagging skin, the lifting treatment restores facial contours by stimulating collagen production. The result is firmer, smoother skin with a youthful texture. This treatment counteracts the effects of gravity, rejuvenating the skin and improving overall facial symmetry.

RECOVERY: This treatment relaxes jaw muscles affected by bruxism (teeth clenching or grinding), relieving tension and preventing discomfort. Regular sessions can reduce jaw prominence, improve facial symmetry, and soften tension-related lines, harmonizing the lower face.

TEXTURE: Designed to refine and smooth the skin's surface, this treatment minimizes fine lines, reduces roughness, and balances skin tone. By promoting cellular renewal and collagen production, it leaves the skin visibly smoother and more even, providing a radiant appearance and polished texture.

TIGHTENING: This firming treatment focuses on enhancing skin elasticity and firmness, combating sagging. By boosting collagen and elastin production, it strengthens the skin's structural integrity, creating a more lifted and resilient appearance. This process fights wrinkles and sagging, restoring a smooth and youthful texture.

BENEFITS OF THE VISAGE FACIAL MUSCLE TONING TREATMENT:

Muscle Stimulation: Neuromuscular technology stimulates the facial muscles, which can help tone and improve facial contour.

Improved Circulation: Neuromuscular technology can increase blood circulation in the treated area, leading to more radiant and better-looking skin.

Non-Invasive Treatment: As a non-invasive treatment, it does not require cuts or surgeries, reducing recovery time and risks associated with invasive procedures.

Visible Results: Although results may vary depending on the individual and the frequency of treatment, many users report smoother, firmer, and rejuvenated skin after undergoing treatments with the neuromuscular technology.
