ENDOLIFT® & ENDOLIFTX®

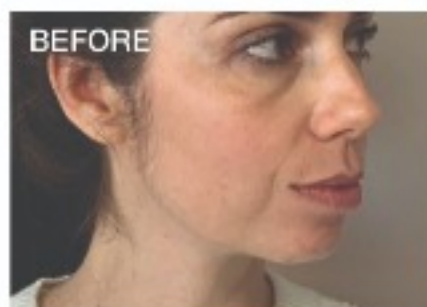

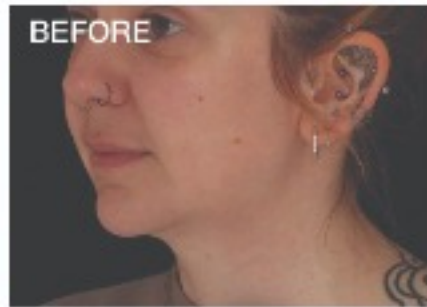

Medical laser treatments performed with the *Eufoton® LASEmaR® 1500 WL* to stimulate both deep and superficial skin layers, tighten the connective septa, and encourage the formation of new dermal collagen. While the procedures are very similar, there are some key differences in terms of specific protocols that adapt to the patient's individual needs. Today, our proprietary technology behind Endolift® is utilized in more than 50 countries, reflecting its growing role in personalized, minimally invasive laser treatments.

- *One Device with Multiple Treatments*
- *Precision Pulse Control*
- *Light & Portable*
- *Smart & Easy Software*
- *Safety Alerts Built In*
- *Self-Diagnostic Protection*
- *High Volume Performance*
- *Premium Build Quality*

HOW DO THEY WORK?

ENDOLIFT® and ENDOLIFTX® are two non-surgical procedures that use the new Eufoton®'s ELX micro-optical fibers. ELX fibers are inserted under the skin without incisions and create micro tunnels aligned with antigravitational vectors. This laser WL interacts perfectly and selectively with water and fat, triggering neo-collagenases and metabolic functions in the extracellular matrix. As a result, collagen production increases in deep skin layers, leading to improved retraction and tightening without creating extra thermal damage or fibrosis. If needed, the selective laser WL can further activate the lysis of adipose cells. Patients experience minimal to no downtime with ENDOLIFT® and ENDOLIFTX® and can get back to their regular routine in a few hours, without pain or recovery time associated with surgical or cannula assisted procedures.

ADVANTAGES

- *The best office-based procedure for skin tightening*
- *Safe and immediate effects with long term results*
- *Minimal or no post treatment downtime*
- *Pure naked fiber for the most gentle sliding in connective septa remodelling*
- *Smallest calibers don't require any needle (facial cannula free treatment)*
- *Pain free procedure with local anaesthetic*
- *Extra safe both in anterograde & retrograde action*
- *Suitable for all ages, phototypes, tanned skin and skin thickness*
- *Therapeutic synergy with many surgical and aesthetic treatments*

endolift®

A High-Performance Aesthetic Solution for Modern Practices

Our technology delivers an impressively comfortable experience with virtually no downtime, making it easy to integrate into busy clinics and patient schedules. It's suitable for both face and body, works safely across all skin types (I through VI), and offers immediate visible benefits with continued improvement over six months. For physicians, that means predictable outcomes, a broader patient pool, and fewer treatment barriers.

From a practice standpoint, the single-procedure workflow and strong return on investment simplify adoption and boost profitability. The system is backed by an international training academy for seamless onboarding and clinical mastery, and it carries the reassurance of Italian engineering alongside a FDA approval. The result is a premium, high-performing addition to an aesthetic portfolio without unnecessary complexity.

Endolift[®] delivers laser energy within the subcutaneous plane to induce focal destruction of adipocytes, and collagen coagulation while limiting superficial thermal dispersion.

THE FUTURE OF NON-SURGICAL FACE LIFTING & BODY CONTOURING

1 HOUR OUTPATIENT PROCEDURE

SUITABLE FOR FACE & BODY

LITTLE TO NO DOWNTIME

IMMEDIATE SKIN RETRACTION

PAINLESS EXPERIENCE
(WITH LOCAL ANAESTHESIA)

RESULTS IMPROVING FOR
UP TO 6 MONTHS
